OnConnect function's Lambda monitor showed...

☰ [Lambda](#) > [Functions](#) > Group9lmsStack-OnConnectFunctionEF88F5A4-R9WTS0rLceVS

ⓘ ⓘ

Lambda sends runtime metrics for your functions to Amazon CloudWatch. The metrics shown are an aggregate view of all function runtime activity. To view metrics for the unqualified or \$LATEST resource, choose **Filter metrics by**. To view metrics for a specific function version or alias, choose **Aliases** or **Versions**, select the alias or version, and then choose **Monitor**.

From the monitor, we were able to see that the function was not invoked, meaning the issue was not with the lambda function. Most likely it was with either our stack or front-end code. Thanks to this, we were able to track down the issue in our debugging and get the chat to work.
